(Pharmacia) with a modified polylinker; Site 1: EcoR I;
Site 2: Not I; NCI CGAP ED1 is a normalized GDNA library
containing the following tissue(s): Chondrosarcoma cell
line CS5. The library was constructed according to
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
CDNA was ligated to an EcoR I adaptor, digested with Not
I, and cloned directionally into pT7T3-Pac vector. The
oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT).8 tail. The
sequence tag for this library is GCTCAAGGCT.

                                                                                                                                                                                                                                                                                                                                                                                                                    (http://www.circlearanch.com/home.html). These heifers, while not registered have known Angus pedigrees going back at least 4 generations. Samples collected: The samples consisted of the following: germinal vesicle-stage occytes; in vitro derived embryos (2-cell, morula, blastocyst and nuclear transfer blastocyst; in vivo blastocyst and conceptuses (days 8, 14, 16 and 18); corpora lutes (days 3, 5, 8, 14, 16, 18 and 35); ovarian follicles (days 0, non-recruited, recruited, early
http://genome.rnet.missouri.edu/Bovine/Methods.html.
Library construction (Standard Protocol): All procedures
have been described in detail elsewhere (Soares et al.,
1994; Bonaldo et al., 1996; Jiang et al., 2001). Total
cellular RNA from each sample was isolated by using
STAT-60 reagent (Tel-Test, Friendswood, TX) and the
poly(A)+ RNA was obtained by two rounds of purification
with the Oligotex mRNA isolation kit (Qiagen) according t
the manufacturer's instructions. The libraries were
constructed essentially as described by the manufacturer'

Second straind synthesis was performed with T4 DNA polymerase in the presence of DNA ligase and RNase H. After second straind synthesis, the double-strainded cDNAs were ligated to Sall adapters (Invitrogen-Life Technologies) and digested with NotI. The cDNAs were size selected by passage through cDNA size fractionation columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equimolar basis and ligated directionally into the NotI and Sall sites of the pCMV-SPORT6 vector (Invitrogen). After ligation of the inserts, the plasmids were electroporated into DH10B bacteria. Preliminary Library Characterization: Randomly chosen clones from each library were analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (-4 96 well plates) to confirm library quality [e.g. the presence of short polyA+ tails, genomic DNA contamination (must be <1%), etc.] and to provide a sequence database representing the predominant clones in each library. The clones were sequenced at the University of Missouri-Columbia DNA Core Facility. After production of the library were pooled to produce a single mixed library (mega-library) for more extensive sequencing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (mega-library) for more extensive sequencing.
Bioinformatics work was performed by GK Springer's bioinformatics group in Computer Science at the University of Missouri-Columbia. Clone Requests: Requests for clones should be made to the Director of the University of Missouri DNA Core facility at: bovine@rnet.missouri.edu. //Clone_"Organ: Blastcoyst; Vector: pExpress-1; Site_1:
ECORV; Site_2: Not1; RNA obtained from pluripotent_cell
line derived from blastcoyst inner cell mass (cell line
HSF-6, NIH Registry designation UCO6. Positive for OCT4
expression by rtPCR, positive for SSEA-3, SSEA-4,
Tra-1-81, Tra-1-60 by immunofluorescence. Negative for
SSEA-1 by immunofluorescence Passage 62. cDNA was primed
using oligo-dT primer:
5'-pGACTAGTTCTAGATCGCGAGCGCCCCC(T)25-3' and cloned into
the ECORV/NotI sites of pExpress-1. Size-selection >1.25
kb resulted in an average insert size of 2.0 kb. This
primary library is normalized (non-normalized primary
library is NIH MGC_280) and was constructed by Express
Genomics (Frederick, MD). Note: this is a Mammalian Gene
Collection library."

New polynucleotide encoding a prostate-specific protein, monitoring and treating prostate cancer in a patient and for diagnosing, use in

Claim 1; Page 510; 543pp; English.

The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and

The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate volume. AAH93357 to AAH93944 and AAM01115 to AAM01318 represent polymucleotide and amino acid sequences used in the exemplification of the present invention

The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The present sequence is a prostate specific polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1195 BP; 382 A; 221 C; 233 G; 359

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a fusion protein comprising at least one amino acid sequence of immunogenic portions of any of the 3 sequences not defined in the specification, or sequences having at least 70 or 90 % sequence identity to any one of the 35 sequences defined in the USPTO web site, which is encoded by any of the 4 nucleotide sequences not defined in the specification. The fusion protein, composition and methods are useful for diagnosing, preventing and/or treating cancer, particularly prostate cancer. The proteins are useful as markers to indicate the presence or absence of cancer. This sequence represents a prostate cancer therapy associated cDNA. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at sequence.html?DocID=US20020192763
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Xu J, Dillon DC, Mitcham JL, Harlocker SL, Jiang Y, Fanger GR, Retter MW, Stolk JA, Day CH, Vedvick TS, Li SX, Wang A, Skeiky YAW, Hepler WT, Hendersen RA, Mcneill PD, Houghton RL, Y De BassolsCV, Foy TM;

                                                                                                                                                                                                                                                                    The present invention relates to methods of detecting a prostate cancer-
cc associated transcript in a cell from a patient. The method comprises
cc contacting a biological sample from the patient with prostate cancer-
cc associated polynuclectides (designated PC genns) that selectively
cc hybridise to a sequence that is at least 80% identical to them. The
cc hybridise to a sequence that is at least 80% identical to them. The
cc prostate cancer-associated polynuclectide sequences are differentially
cc expressed in prostate tumour tissue or in prostate cancer and are derived
cc from the tissues of various organisms such as humans or other mammals
cc (e.g. mice, sheep and dogs). The methods of the invention are useful for
cd disgnosing and treating prostate cancer in mammals. The prostate cancer.
cc associated genes are useful for diagnosing or treating prostate cancer.
cc as well as for identifying modulators of prostate cancer or agents that
cc inhibit prostate cancer. The nucleic acid sequences are particularly
cc useful in gene therapy, as a vaccine or in antisense applications.
cc ABK92115-ABK92263 represent prostate cancer-associated polynucleotide

The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increase in the level of expression of the marker in the patient sample and the normal level indicates that the patient is afflicted with prostate cancer.

Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in ADB75177-ADB75631 represent marker CDNA and proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Schlegel I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25-JUL-2001; 2001US-0307982P.
